Strategies for the Development of Agricultural  
Mechanisation

# Preface

What is AI?

- „A strong statistic machine“ (Francesca Hennig-Possenti at CEMA-Summit 2023)

But ...

- statistical methods can be assessed scientifically!
- Is a statistical assessment possible for GenAI, too?

# Is this the future of agriculture?

Picture source: Sébastien Bosse (FhG HHI, Berlin / created with ChatGPT)

# Preface

What is AI?

- „A strong statistic machine“ (Francesca Hennig-Possenti at CEMA-Summit 2023)

But ...

- statistical methods can be assessed scientifically!
- Is a statistical assessment possible for GenAI, too?
- No!

Conclusion

- With GenAI we have reached a new level of AI

# Application of AI-Software – basic considerations in EU

- AI is a powerful tool for technology progress (e.g. in agriculture)
- Basic question: How to apply AI in ethically and socially correct way – potential issues:
  - subliminal influence
  - fragility of specific categories of persons (disabled persons)
  - quality of input data to AI solutions determines result

Source (partially): Dr. Francesca Hennig-Possenti, Chairwoman of the CEMA ad hoc group AI, Senior Legal Counsel, John Deere GmbH & Co. KG – article to be published on ITU's web page

# Explaining AI with horses: Computer, what do you see?

**"Of course, it's a horse!"**

Source: Sebastian Bosse (FhG HHI)

# Explaining AI with horses: Computer, what do you see?

**“I don’t know, but certainly not a horse!”**

Source: Sebastian Bosse (FhG HHI)

# Why would I trust you?

# Application of AI-Software – basic considerations in EU

- AI is a powerful tool for technology progress (e.g. in agriculture)
- Basic question: How to apply AI in ethically and socially correct way – potential issues:
  - subliminal influence
  - fragility of specific categories of persons (disabled persons)
  - quality of input data to AI solutions determines result
- EU legislators tried to set frame conditions for AI so that ...
  - ... AI is principally applicable
  - ... risk of misuse is minimized
  - ... the framework for competition is set consistently
- EU legislators' approach based on risk categorization of AI applications

Source (partially): Dr. Francesca Hennig-Possenti, Chairwoman of the CEMA ad hoc group AI, Senior Legal Counsel, John Deere GmbH & Co. KG – article to be published on ITU's web page

# EU AI Act (AIA)

## The AIA ...

- is globally first approach to regulate development and application of AI and thus gives an ethical and legal framework for AI
- is a part of EU's Digital Strategy
- was approved by the EU Parliament on June 14<sup>th</sup>, 2023
- will likely come into force in January 2026
- will set significant requirements on enterprises

USA innovates

China copies

EU regulates

**AI is too important not to regulate and it's too important to badly regulate**

European Parliament, Strasbourg, June 13<sup>th</sup>, 2023.

Closing statements by Margrethe VESTAGER, EC Executive VP in charge of Europe fit for the Digital Age, and Commissioner for Competition

# AIA risk categorization approach

Source: <https://digital-strategy.ec.europa.eu/en/policies/regulatory-framework-ai> called on Aug. 24th 2023

# Remaining risks and issues

- Different ethical approaches in different regions of the world
  - Challenge to develop AI in a legally/ethically compliant way in different regions of the world
  - Competitive advantages through application of high / unacceptable risk AI outside of EU (equality of opportunity globally)?
- Different risks of same AI application in different environments (e.g., closed or open environments)?
- Legal obligations might become obstacle to technology progress (bureaucracy)
- Compliance check of risk levels by authorities (bureaucracy)

# EU AI Act - Global role model or obstacle?

AI has the capability to revolutionize production processes and may play a prominent role in agriculture; however, enhancing the capability of production may come at a price. Several ethical questions arise from the application of AI leading to the need of a thorough balancing of interests

(Dr. Francesca Hennig-Possenti, JD, CEMA).

## What is the price we are willing to pay?

# EU's Digital Strategy

- *The Data Governance Act* creates a new way of managing data to increase trust in and facilitate data sharing.
  - *The Digital Markets Act* creates fair and contestable markets for innovation, growth, and competitiveness in the digital sector.
  - *The Digital Services Act* creates a safer digital space where the rights of all users of digital services are protected.
- *The Data Act* regulates access to data in B2B, B2C, and B2G (business-to-government) relationships and while switching between cloud providers.
  - *The AI Act* enacts stringent regulations of (high-risk) AI systems and prohibition of certain practices.

# Coming back to the preface

What is AI?

- „A strong statistic machine“ (Francesca Hennig-Possenti at CEMA-Summit 2023)

But ...

- statistical methods can be assessed scientifically!
- Is a statistical assessment possible for GenAI, too?
- No!

Conclusion

- With GenAI we have reached a new level of AI
- The EU Data Strategy (esp. the AIA) needs being updated
